

Re-employment of a former employee

If you would like to re-employ a former employee (alumnus), you can do so by using the alumni file.

Please open the alumni file for the employee to be re-instated, click on  and select in the following dialogue whether the former employee should be assigned old or new contractual data.

The date set for **Valid from** is equivalent to the re-employment date for the former employee.

This setting is useful, for example, for seasonal workers who are re-employed under the same conditions as before.

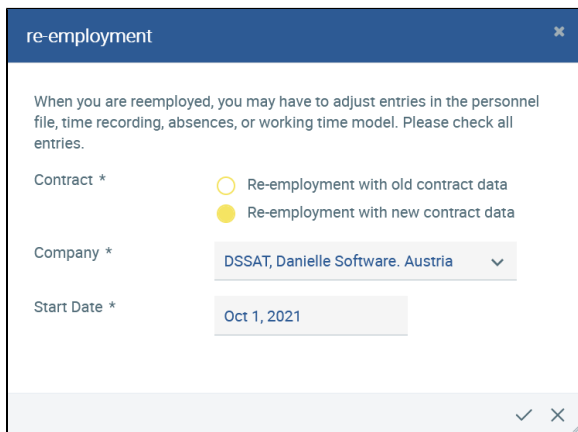

The screenshot shows a dialog box titled "re-employment" with a close button (X) in the top right corner. Below the title bar, there is a text instruction: "When you are reemployed, you may have to adjust entries in the personnel file, time recording, absences, or working time model. Please check all entries." Below this, there are two radio button options for "Contract *": "Re-employment with old contract data" (which is selected, indicated by a yellow dot) and "Re-employment with new contract data" (which is unselected, indicated by an empty circle). Below the radio buttons is a text input field for "Start Date *", which is currently empty. At the bottom right of the dialog box, there are checkmark and close (X) icons.

Re-employment with former contractual data

The employee starts with the working time model, basic leave, company, contract type, department and superior that were previously configured. The start date for the contract changes to the date selected under **Valid from**.

This setting is useful if a former employee is to be re-employed in a new department after several years or has to work fewer hours (part-time contract).

The screenshot shows the same "re-employment" dialog box. In this instance, the "Re-employment with new contract data" radio button is selected (yellow dot), and the "Re-employment with old contract data" radio button is unselected (empty circle). The "Company *" field is now populated with a dropdown menu showing "DSSAT, Danielle Software. Austria" with a downward arrow. The "Start Date *" field is now populated with "Oct 1, 2021". The checkmark and close (X) icons remain at the bottom right.

Re-employment with new contractual data

If new contractual data are required for a re-employment, a new company can now be selected, if necessary. Contract type, basic leave and weekly working hours as well as the working time model remain empty and have to be configured.

In both cases, a new contract is added to the existing contract(s) to show that the employee is entering into a new contract with the company. This can be seen in the personnel file under **Contracts**.
