

This update includes performance improvements, chatbot enhancements, and bug fixes.

Here are some of the most important changes:

Performance

- Performance improvements, for example in the [Employees Overview](#).
- Improved performance when displaying icons.
[blocked URL](#)

Notifications

- Since the last release, situations could occur where users have seen incorrect [notification](#) texts. This bug has been fixed.

Chatbot

- If a user has already started [time recording](#), a notification will now automatically be displayed on when the time recording has been started.
- Furthermore, a notification is now displayed for users that are no longer logged in (authenticated) when they are trying to perform an action for which their chatbot instance needs to be authenticated.

Employee -> [User management](#) -> Technical keys

- To avoid unnecessarily accumulating unused technical keys (channel IDs) for a user, expired keys that are no longer needed are now automatically removed when the user reauthenticates (via the app, Telegram, etc.).[blocked URL](#)
